

Steps to Install Python

Step 1: Downloading the Python Installer

1.1 Go to the [official website](https://python.org) of Python.

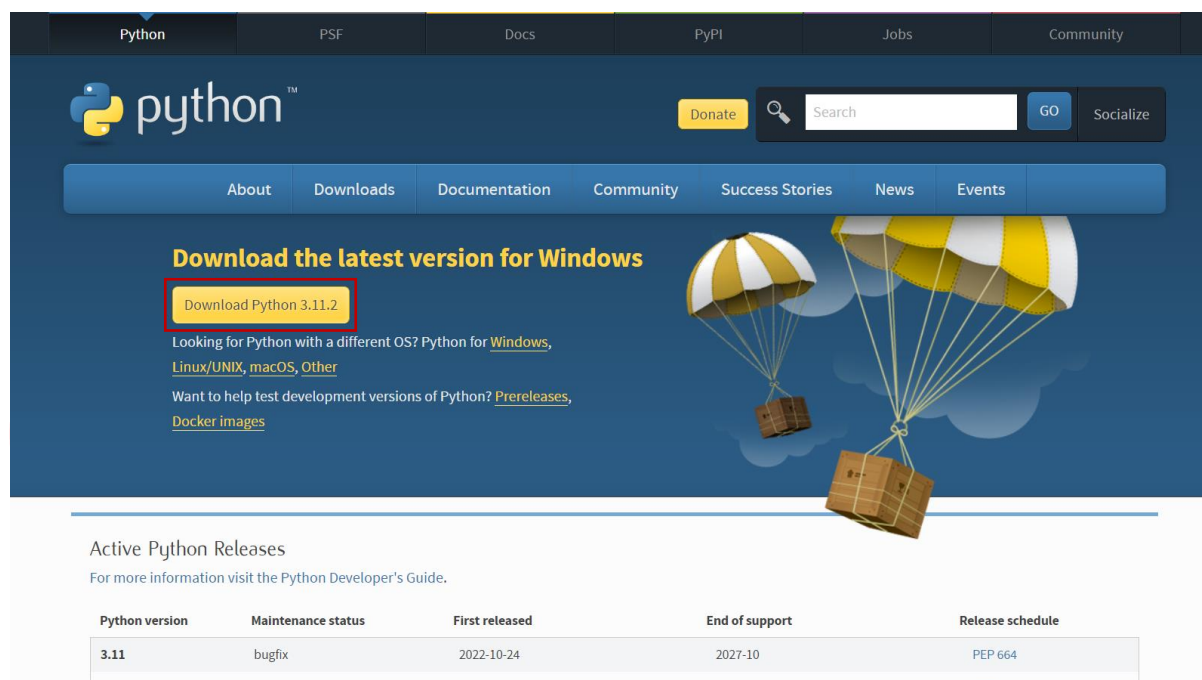

1.2 Click the **"Downloads"** option on the page. The URL will change.

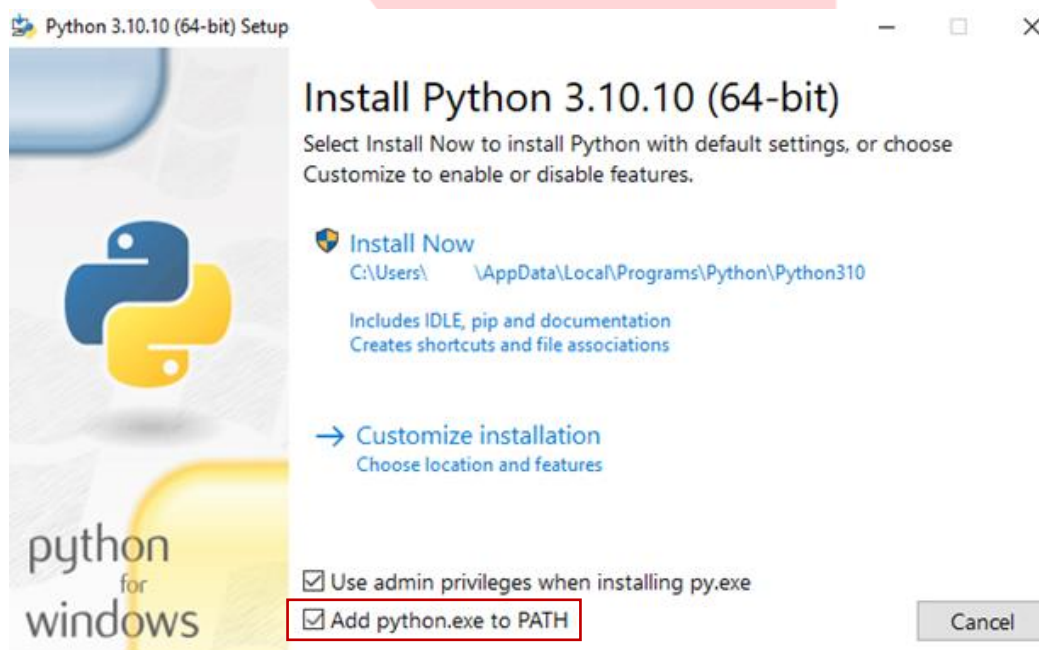

Steps to Install Python

1.3 Click the "Download Python 3.11.2"

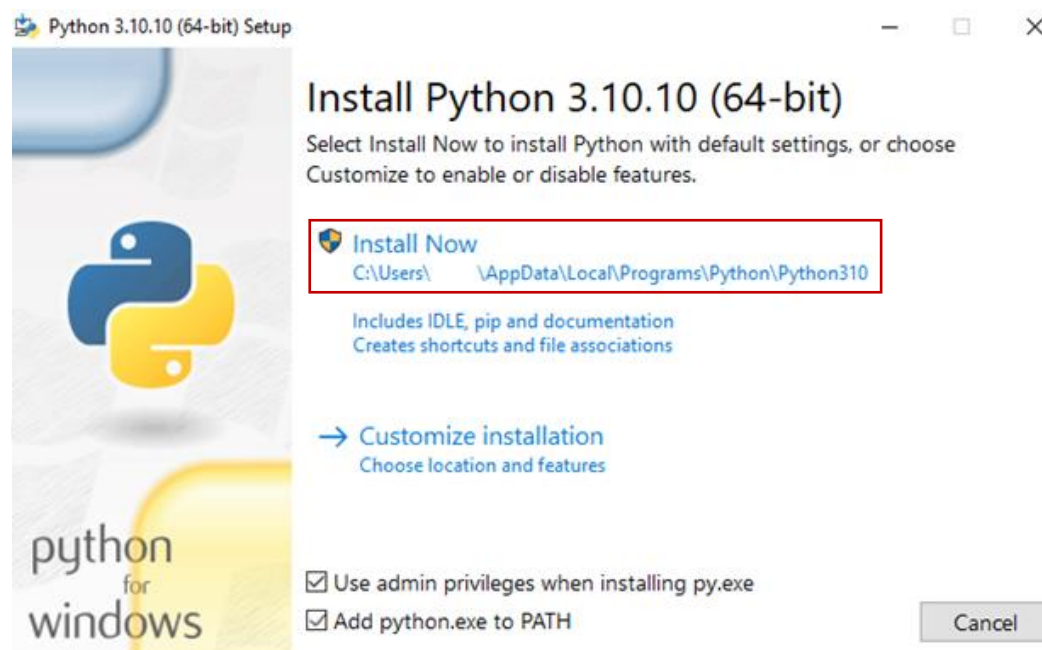

Step 2: Running the Executable Installer

- 2.1 After downloading the Installer, double-click the **.exe file** to run the Python Installer.
- 2.2 Select the **Add python.exe to PATH checkbox**. This enables users to launch Python from the command line.

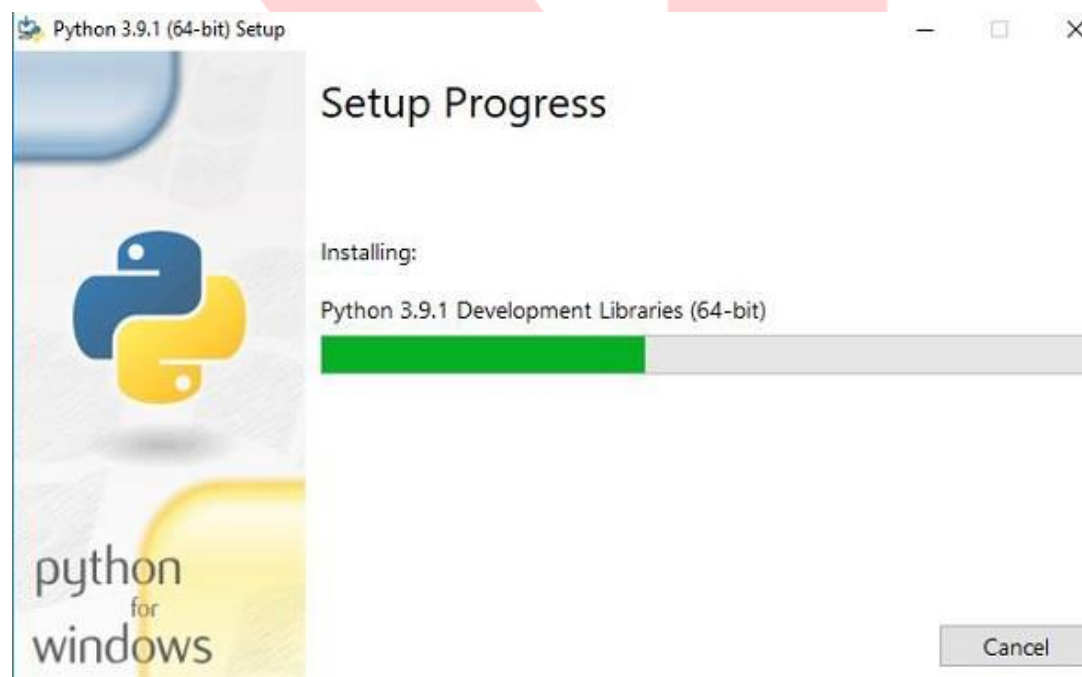

Steps to Install Python

2.3 Click the “Install Now” option.

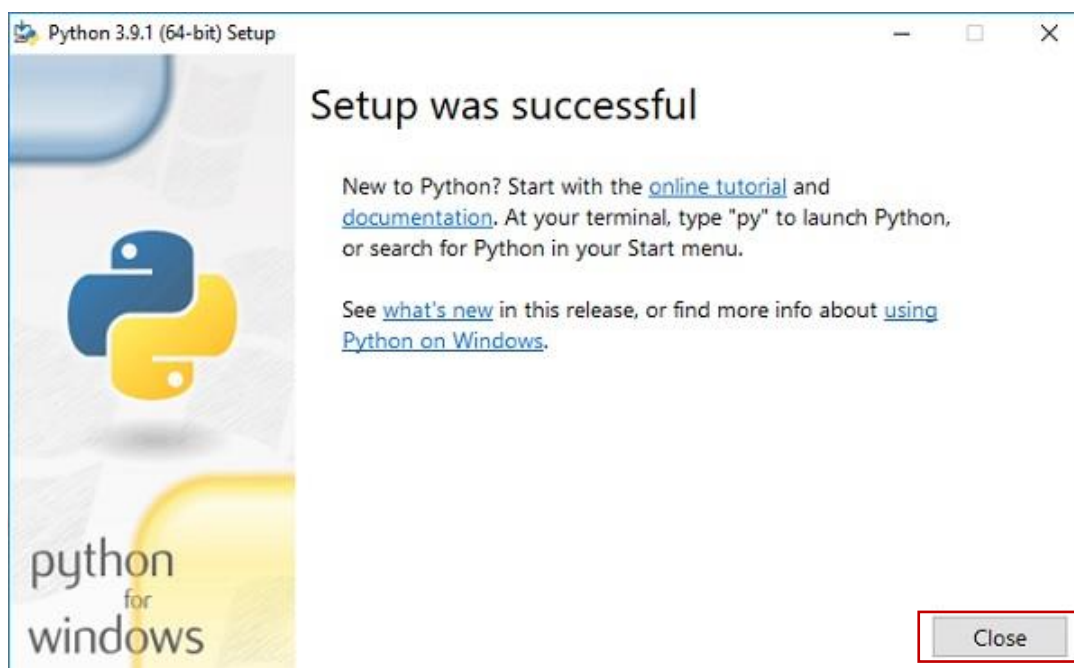

2.4 The installation process will start automatically.

2.5 Once the installation is successful, the following screen will be displayed.

Steps to Install Python

2.6 Click the **"Close"** button to end the installation.

Step 3: Running the Executable Installer

3.1 Go to **Start**, enter **cmd** in the search bar, and click **Command Prompt**.

3.2 Enter the following command in the command prompt: ***python --version***

3.3 It will show the following output:

```
C:\Users\Priya Bose>python --version
Python 3.10.10
```
